# about veracity solutions

- Veracity Solutions helps organizations plan, build and launch successful software solutions from conception through adoption.
- Companies solve their stubborn and unique challenges at the core by relying on our expert advice, coaching and staff.
- We can help you solve your critical business goals and lift your team in the process.

What was your  
biggest regret or  
mistake in your  
DevOps  
transformation?

“I created a  
DevOps  
Team!”

*DevOps Days SLC 2017...*

**DevOps  
is a set  
of  
principles and  
practices.**

  
**KEEP  
C.A.L.M.S.  
AND  
DO  
DEVOPS**

**DevOps  
is not a  
team (or  
group or  
person)!**

# Signs of a DevOps Team

A team  
(centralized  
group) named  
“DevOps”

“We don’t (or  
can’t) do  
DevOps. They  
do.”

Siloes of  
responsibility,  
accountability.  
Massive  
handoff waste.

No longer a  
platform  
provider or  
enabling team,  
but actually  
flow value  
themselves.

They become  
what you were  
trying to  
eliminate—a  
bottleneck!

● Dev

● Ops

# What causes DevOps teams to form?

*If DevOps really describes a cultural context with practices and tools, why do DevOps teams form and persist?*

- Renaming an existing team, e.g. Release Engineering to DevOps
- Most common: Create a new team called DevOps
  - “We need a new team” New work -> New team
  - New people
  - New skills, mindset, tools
  - Innovation work (vs. ongoing, existing work)

# Address Fundamental Incompatibilities

Ongoing Operations

**Repeatable and Predictable**

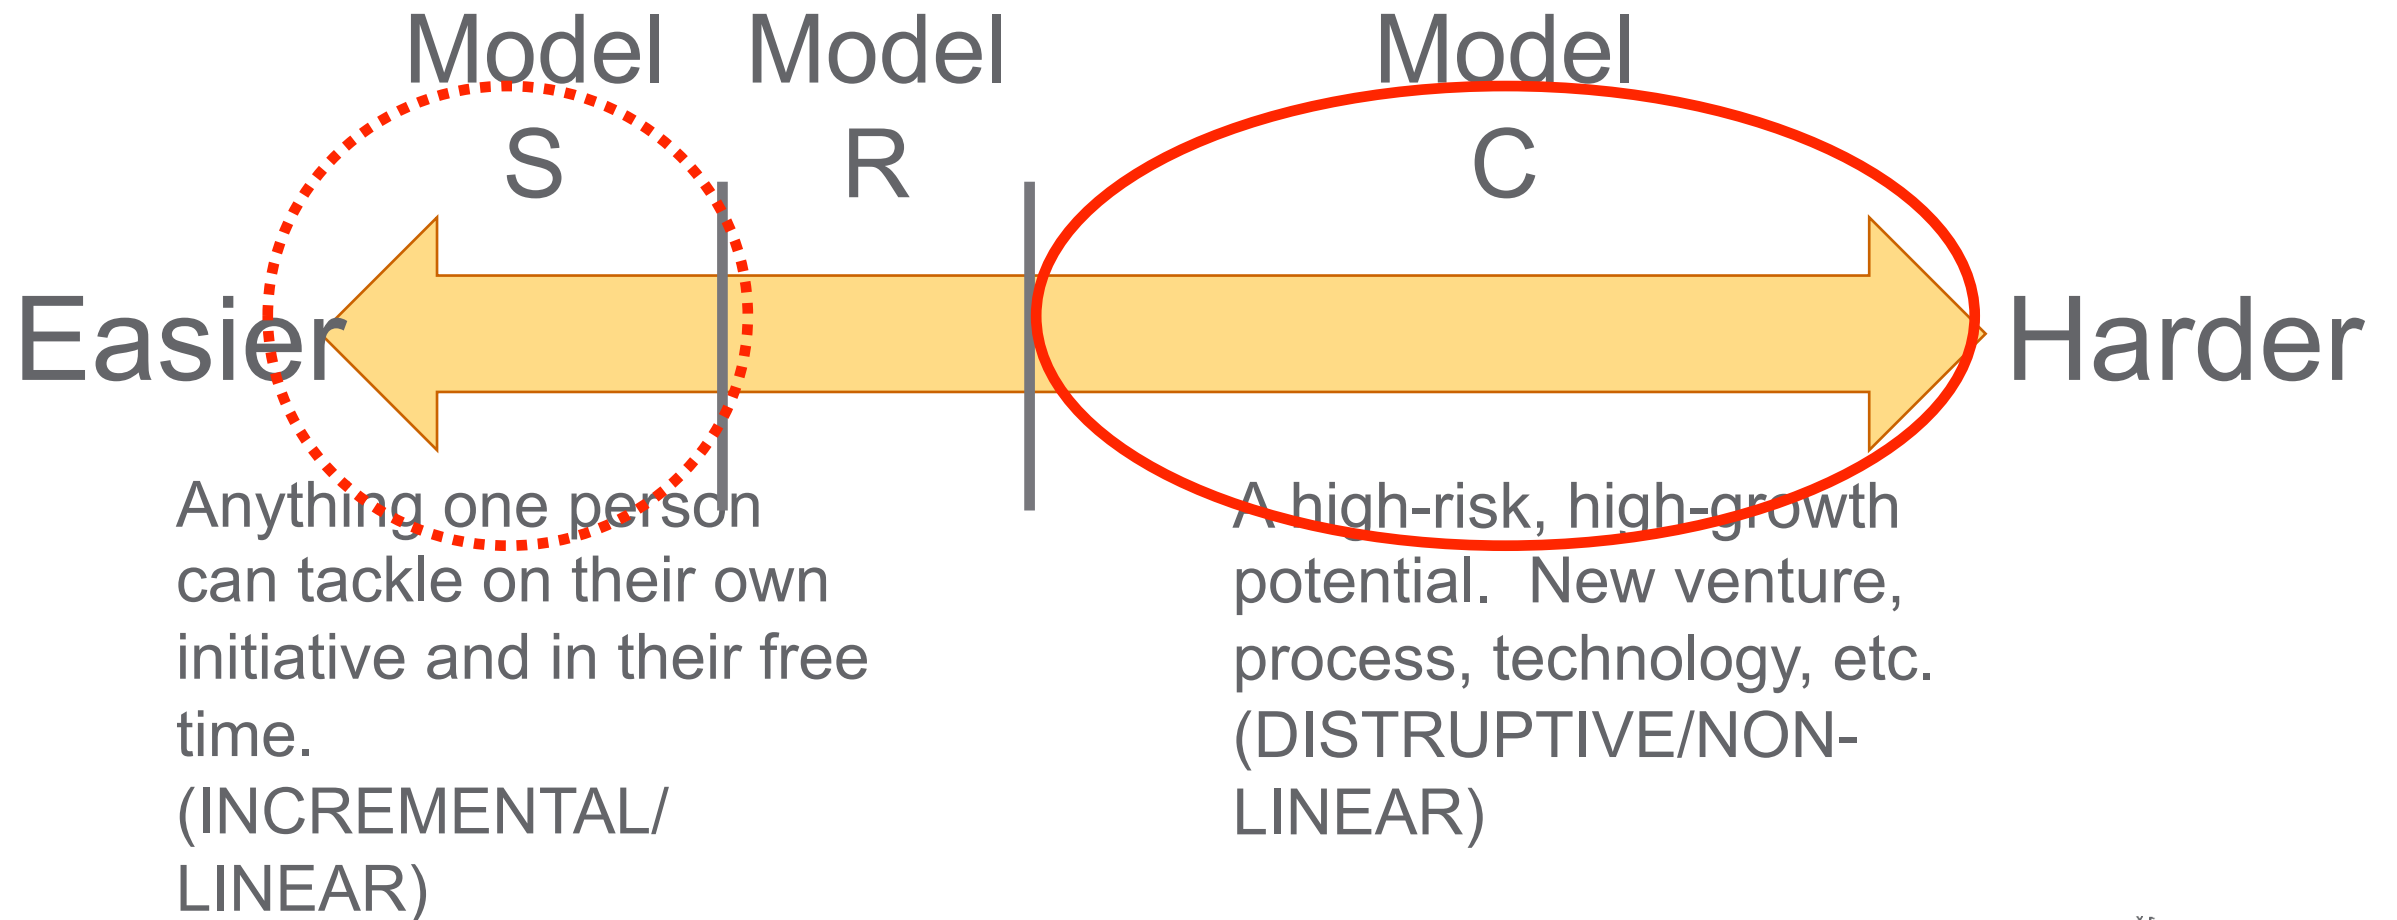

Innovation

**Nonroutine and Uncertain**

**Innovation Leaders Must Think Differently  
About Organizing and Planning**

# The Innovation Model Spectrum

**Model  
S**

Performance Engine (Core)

**Model C**

Innovation Team

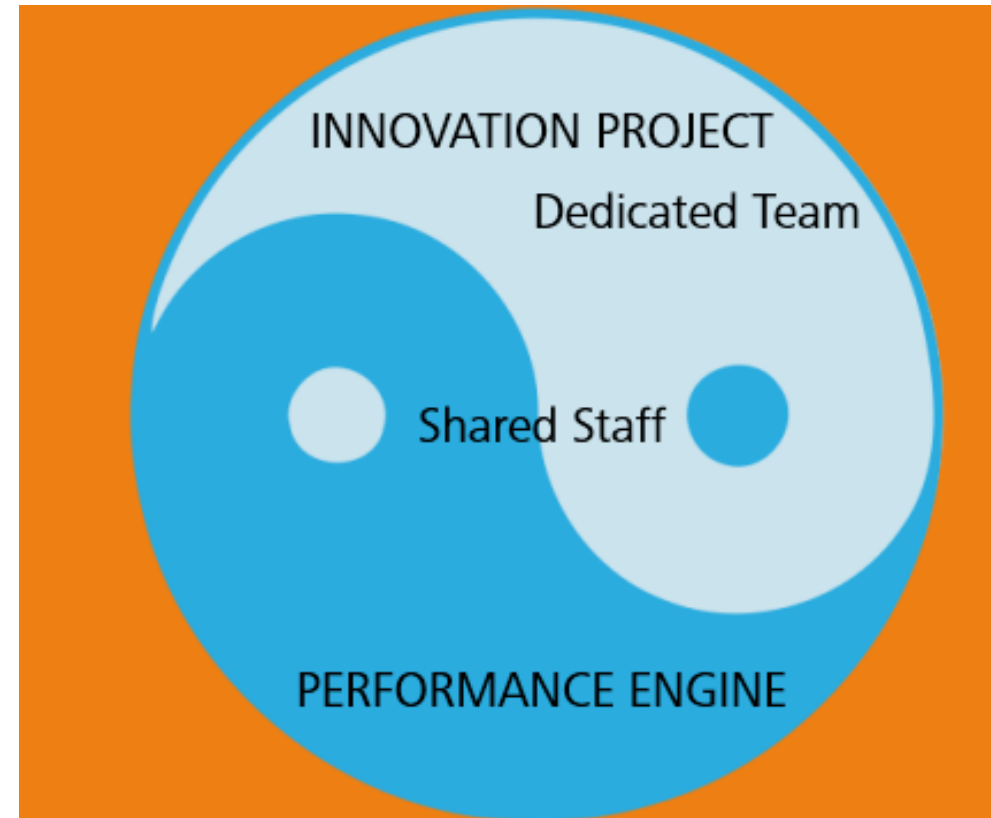

# Executing Model C Innovations

Build a dedicated team with a special plan.

Manage the partnership.

Merge innovation back into performance engine.

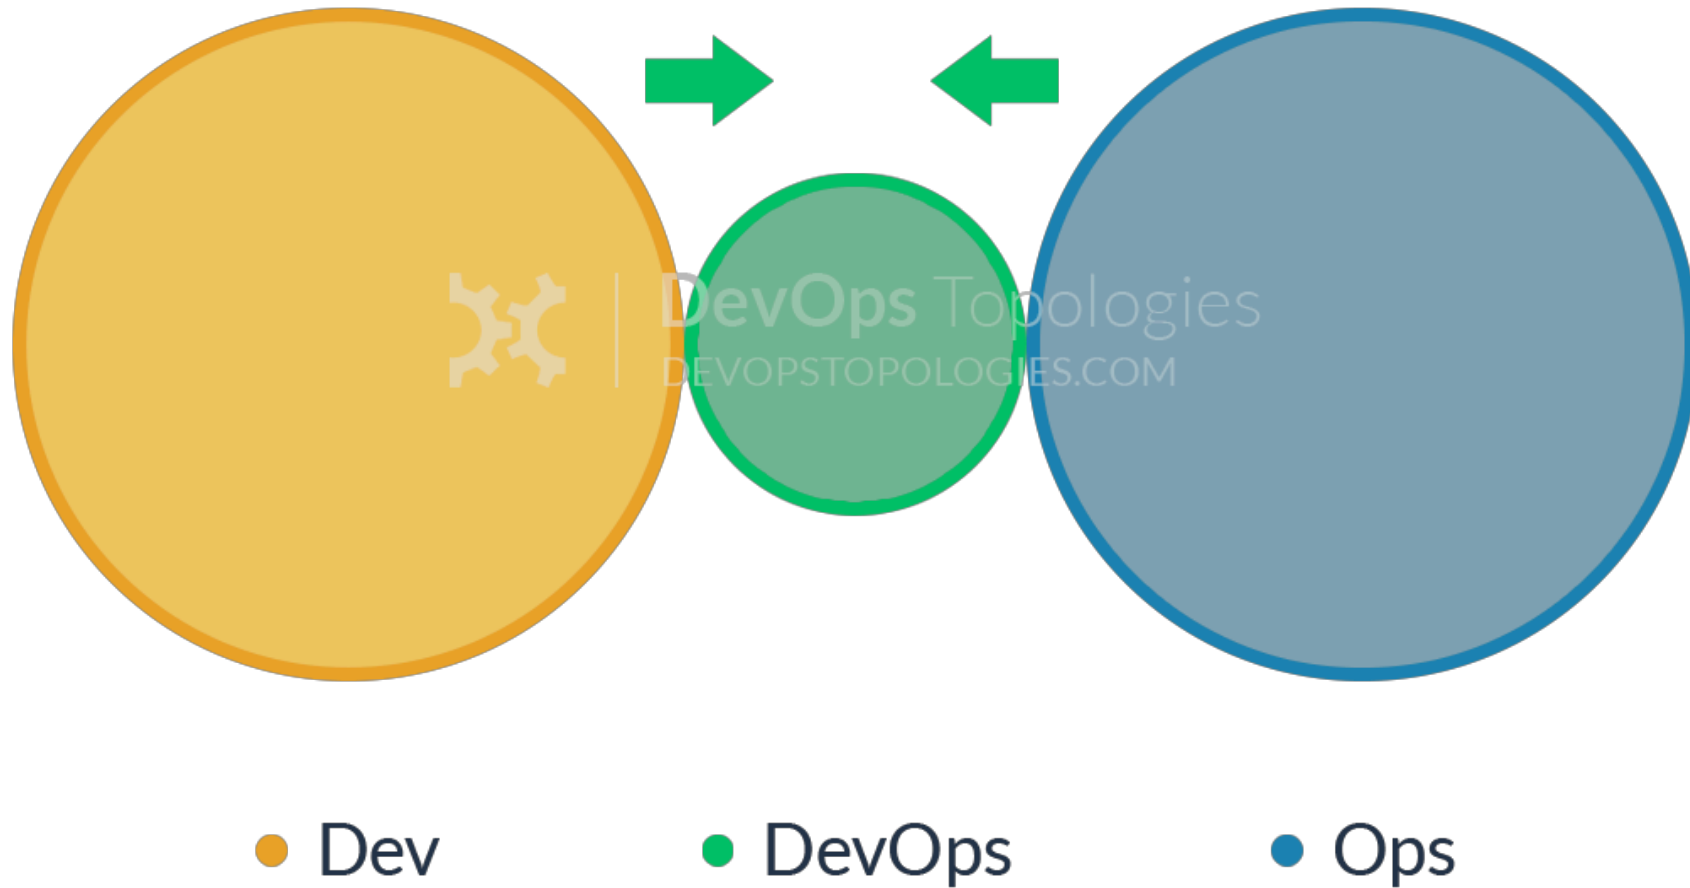

# Recommendations

- DO NOT name a team or group “DevOps”
  - Unless it is an evangelist group (e.g. the DevOps COE or a DevOps Dojo).
  - Name teams for what they **build**, not their goal.
- Select a long-term team topology strategy and execute the DevOps innovation with that in mind.
  - See *web.devopstopologies.com*
- Create innovation teams for new services (platforms) and absorb into Dev or Ops **organizations** respectively!
- Execute cultural & behavioral changes as “type S” into the performance engine.

# Team with Expiration Date (careful!!)

# Ops as PaaS / IaaS

● Dev ● DevOps ● Ops

# SRE Model

# Evangelist / Dojo Model

# Full Collaboration
